

Dear Hiring Manager,

I am writing to apply for the position of Data Engineer. I believe my background in data analysis and data engineering makes me an excellent candidate for this role.

As a data analyst, I have experience in creating automated forecasting models, data mart development, and developing features from transactional level data. I am also proficient in using Python to build data pipelines for analysis. In my previous role as a data scientist, I worked with business partners to understand complex methodologies and data manipulations such as the creation and replication of pseudo default datasets used for scorecard modeling.

In addition to my experience in data analysis, I have also developed a strong understanding of big data technologies. I have experience in building data pipelines and executing ETL processes using Hadoop, Spark, and other tools.

I believe my skills and experience make me the ideal candidate for the Data Engineer role at Hartford. I would appreciate the opportunity to discuss my qualifications further with you. Thank you for your time and consideration.

Sincerely,

Sean Riggs
